

SupportPilot AI - Business Report

Total Tickets: 34

Business Health Score: 55/100
Moderate concern

Executive Summary

Customer support shows a high volume of negative sentiment (50%) and a significant number of escalated cases (8 out of 34). While most cases are completed, the combination of negative feedback and escalations indicates potential issues in service quality or issue resolution. Priority distribution is balanced but with a notable portion marked as high priority.

Recommendations

- Conduct a root cause analysis of negative and escalated cases to identify common issues.
- Implement immediate training and quality improvement measures for support staff.
- Enhance communication protocols to reduce escalations by addressing issues early.
- Increase resources or optimize workflows to reduce backlog of new cases and improve response times.
- Regularly monitor sentiment trends and set targets to improve positive feedback percentage.

Root Cause Analysis

- High volume of refund requests often accompanied by threats of public complaints or legal action.
- Shipping issues involving non-receipt of products causing customer dissatisfaction.
- Technical issues reported with products not working as expected.

Trend Analysis

The data shows a predominance of negative sentiment tickets on 2026-07-26, mostly high priority with escalations, though most have been completed. There is also a significant number of neutral and some positive sentiment tickets, mainly low priority. Several tickets remain new at low priority and neutral sentiment. On 2026-07-27, negative sentiment high priority tickets persist. Overall, customer satisfaction appears challenged with a high volume of negative feedback despite resolution efforts.
